Attacking the Target using Phishing Technique
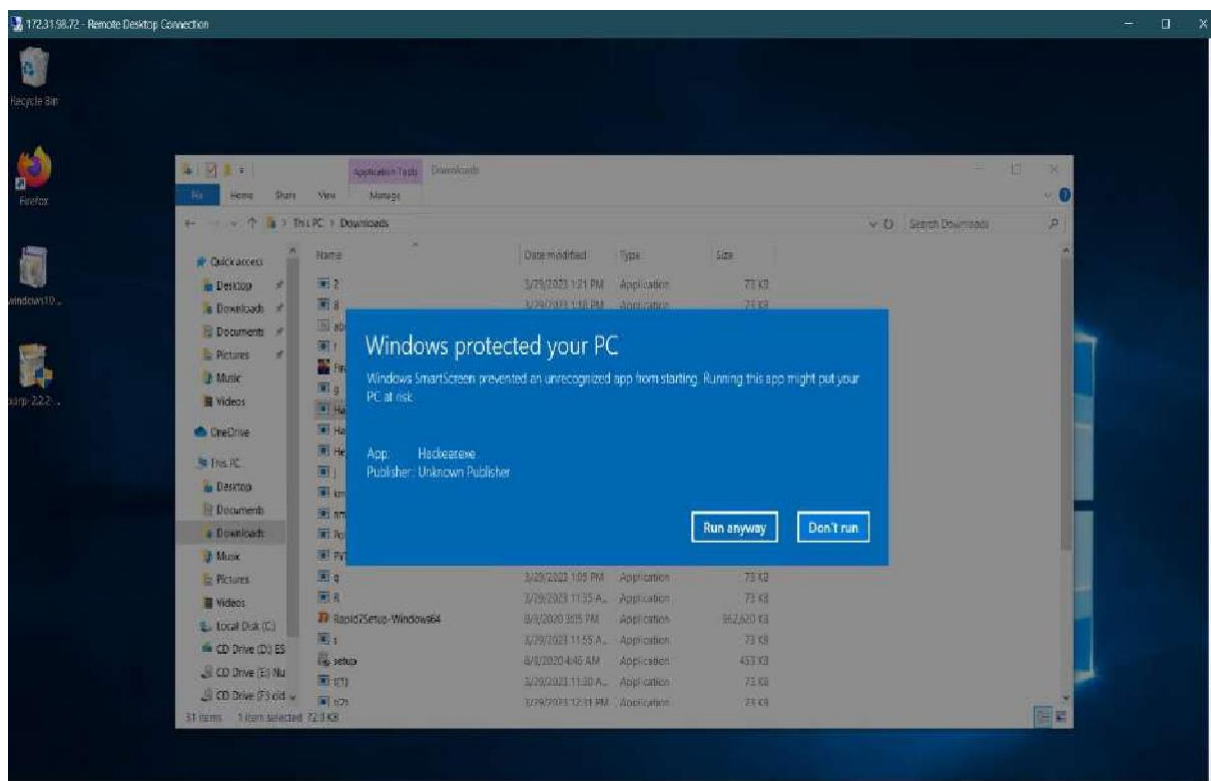

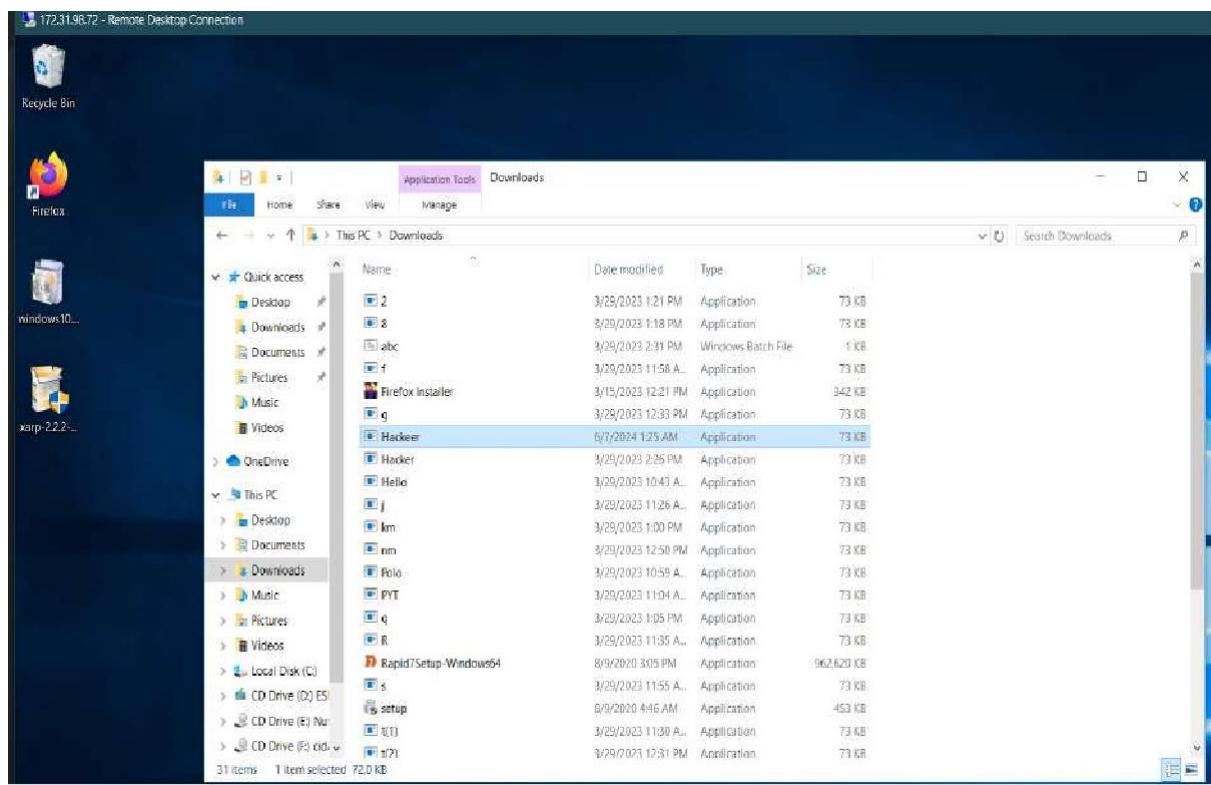

Step to Perform Phishing Attack

Generating url link for phising purpose here, and then its circulated through e-mails and other things.

When victim tries to clicks the url, it starts downloading the malicious file without permission.

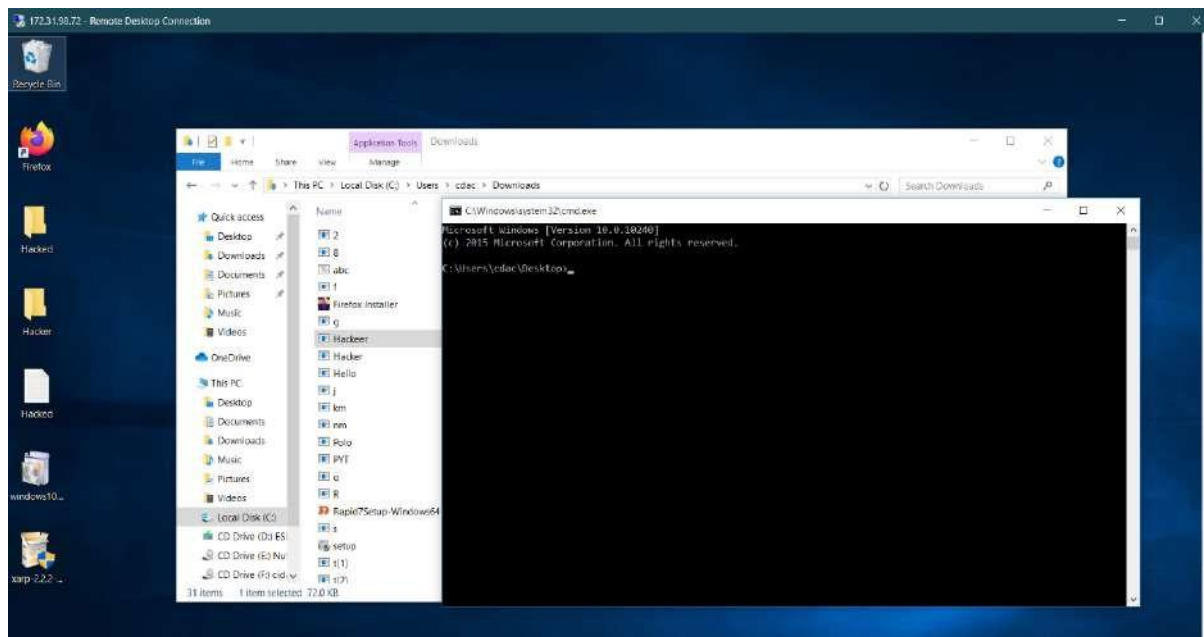

Here above it has been downloaded.

*Now when its download user tries to open out of curiosity.*

When he tried to open the malicious file, the firewall prevented him but still he clicks on RUN ANYWAY to dig the file.
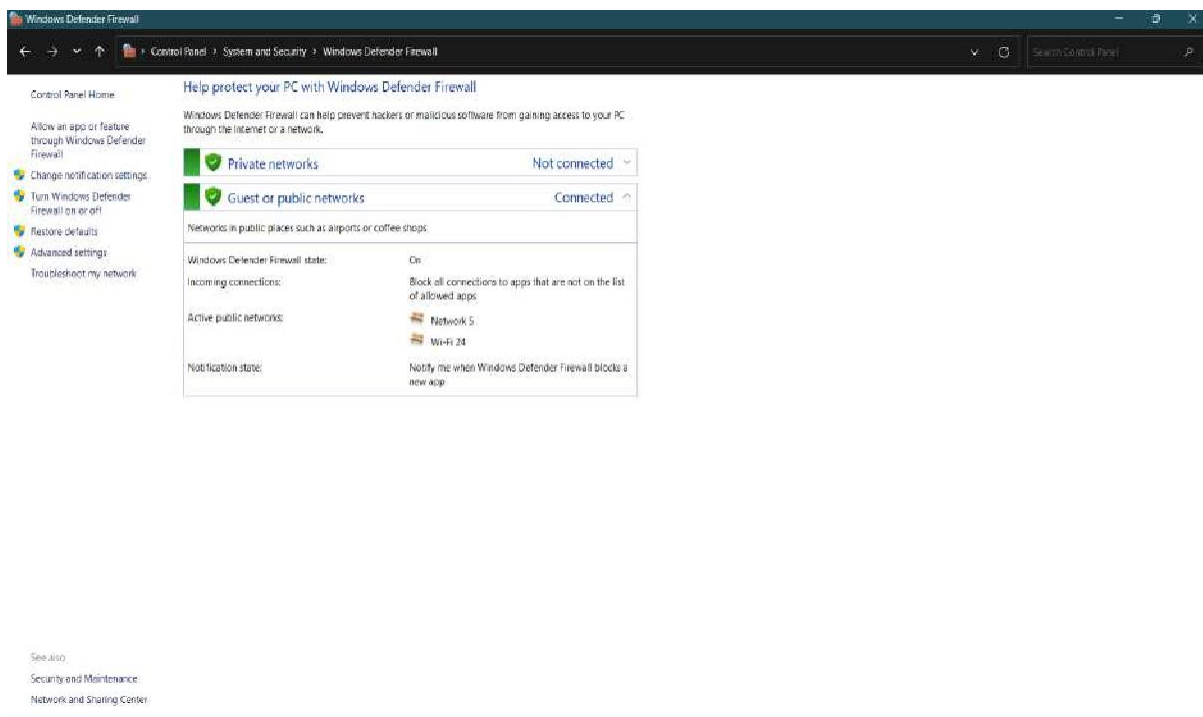

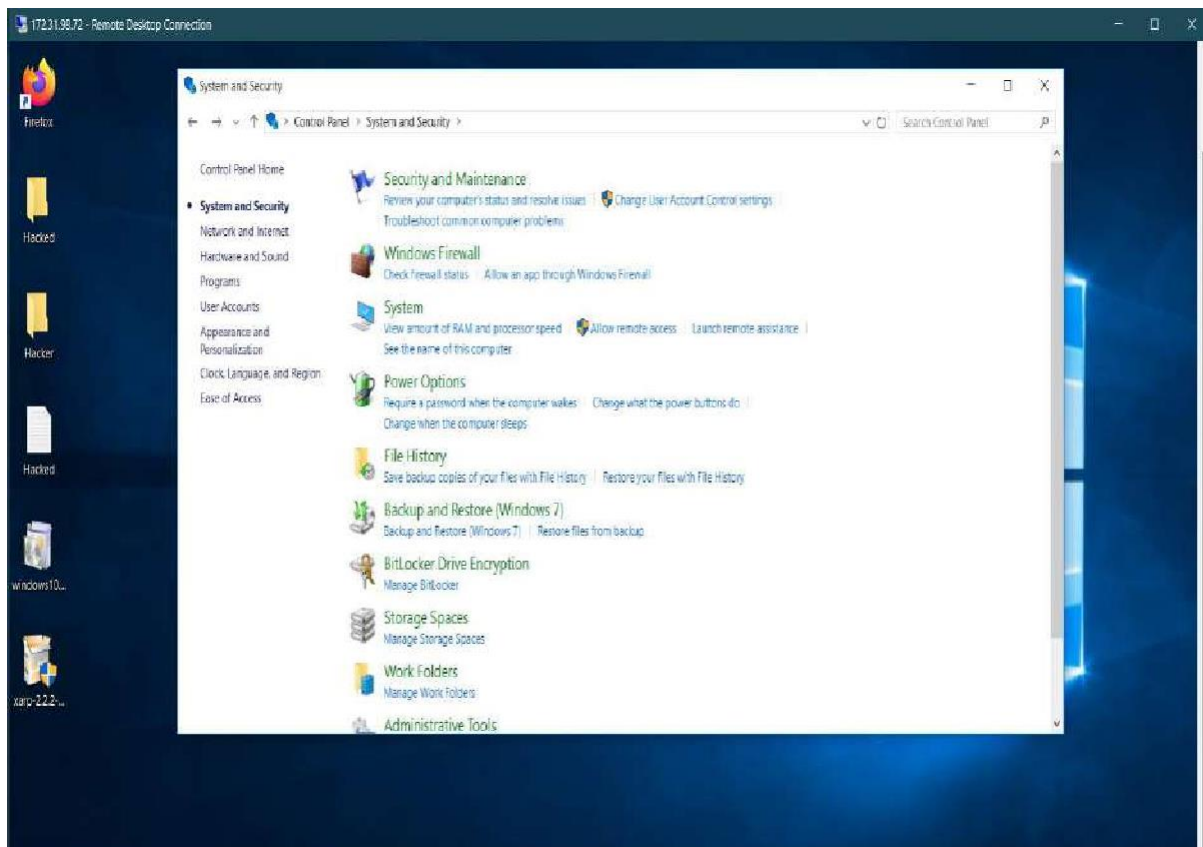

Here the malicious file is downloaded in victim's machine, now the attacker can access all the information on victim's machine.

Defence from Phishing Attack

Steps to be followed to turn on the Defender firewall
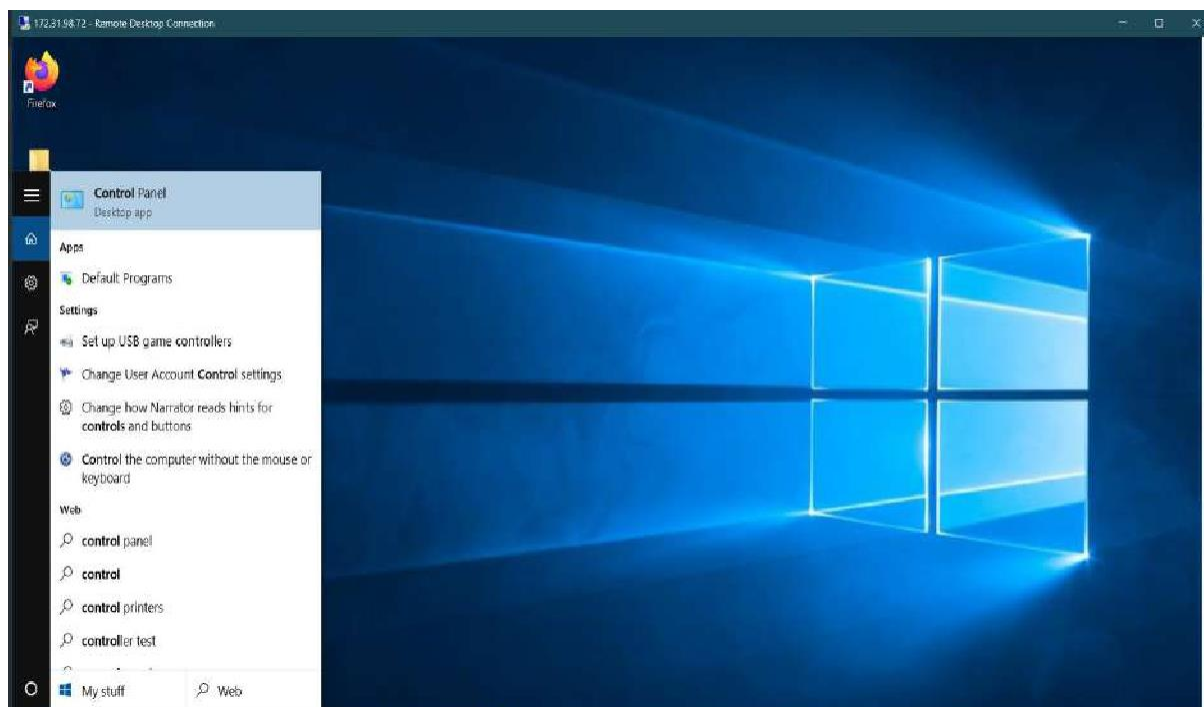

Now the firewall has been turned ON.
